

ggCircuit SpecOps Support Services

From simple software management solutions and PXE Boot Server set up to full hardware and software build outs, the team at ggCircuit is fully invested to help you realize your esports center goals. With a dedicated and experienced team supported by industry leading esports center management software solution ggLeap, ggCircuit is set up to help you with all aspects of setting up your center including: financial planning; center design; technical set up and support; operations; training center staff and ongoing operating support.

Case Study 1: Christian Brothers College High School (CBCHS)

Cost: \$165,000

Space: 1488 sq ft

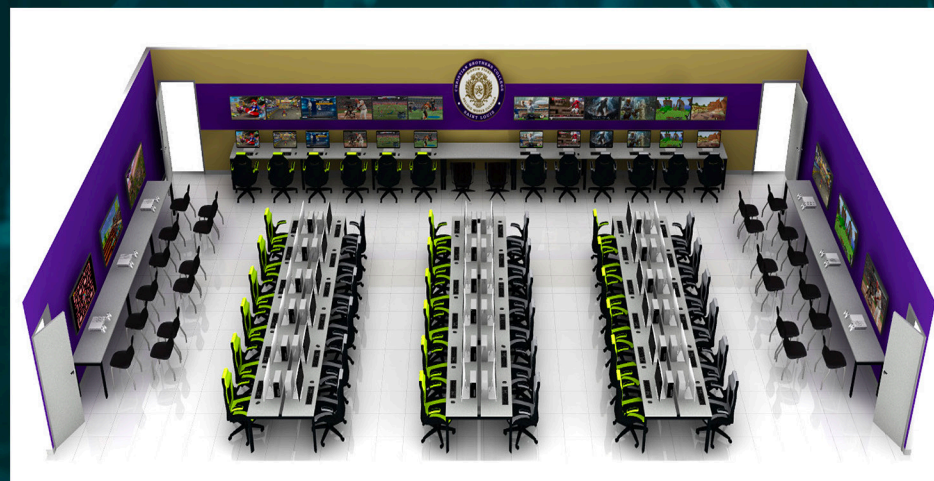

Number of Stations: 52

Project Included: Design, Hardware, Software, Furniture, Licenses, Fees, Installation, Electrical & Networking

Summary: ggCircuit was approached to help CBCHS set up their first esports center on campus. With a limited budget and space, the team worked with the school and presented various scenarios that would fit their layout and budget as well as their student's gaming needs. It was identified that not all students would want to learn to compete on a PC and the school also wanted to give students as many options as possible to be involved in this new initiative. After the plan was approved ggCircuit installed the PXE Server and managed the complete installation process directly with the CBCHS IT staff.

Outcome:

- 48 PC Gaming Stations (Mouse/Keyboard + Xbox Controller)
- 4 PlayStation Stations with 65" TVs
- Furniture
- 12 x 'Slave' Spectator TVs
- 12 x Logitech Streaming CAMs
- PXE Server
- ggLeap software, games + maintenance support
